

Loctite® Composite Repair System – Pipe Repair

This innovative repair solution for steel pipes is a fast and economical alternative to pipe replacing. Providing materials for surface preparation, reinforcement and top coating, this all-in-one solution is applied directly to the pipe's surface. The repair system reinforces and seals steel pipes designed for high pressure, temperature and chemical resistance.

Application areas

- Repair system for steel pipes
- Pipes with outside or inside corrosion
- Pipes subject to chemical attack or mechanical wear
- Including complex geometries: bends, tees, reducers & flanges
- Refineries and petrochemical plants, power plants, water utility, etc.

Your benefits

- No need to replace pipes
- In situ repair
- Increase pipe lifetime up to 20 years
- Tailor-made solution including specific training and calculation of repair

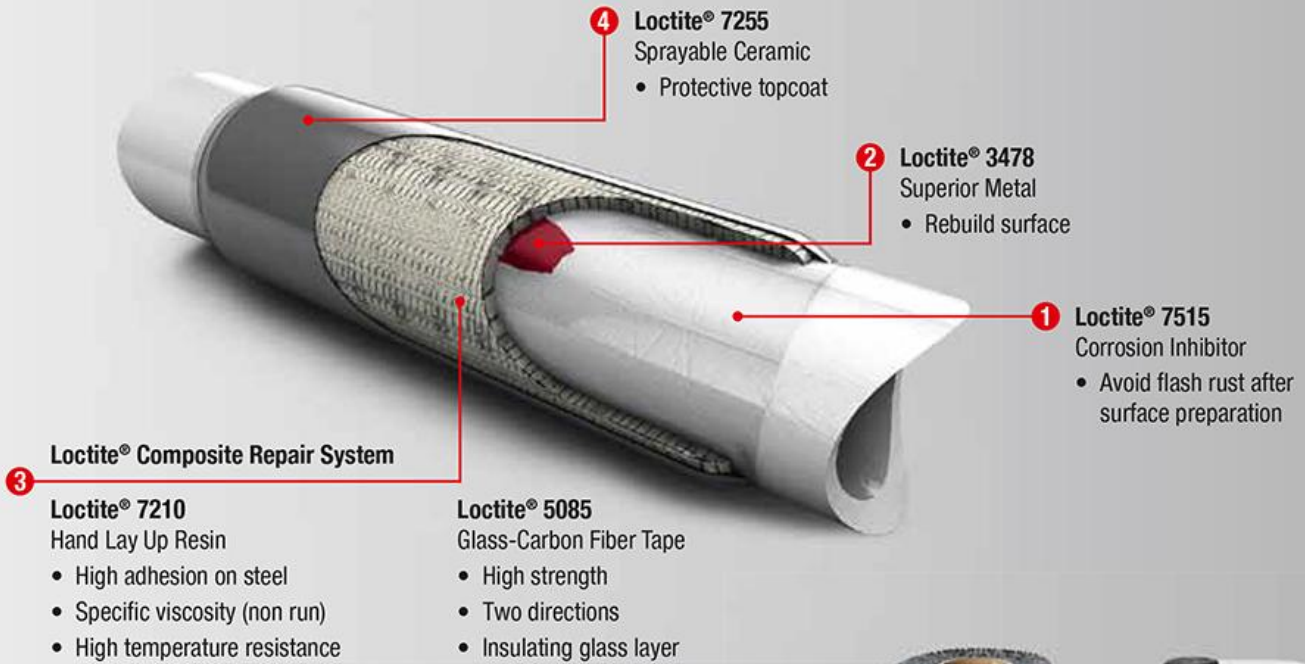

Certified by

Germanischer Lloyd

Loctite® Composite Repair System is specifically developed to meet the requirements of ISO/TS 24817. The system consists of:
